ABOUT

Years of shipping production games have sharpened my architectural instincts and my confidence to own features end to end. Outside of work I keep prototyping new mechanics and system designs, which keeps my technical judgment sharp.

EDUCATION

2015 - 2021 Selçuk University
B.Sc., Computer Engineering GPA: 2.93/4.00

LANGUAGES

- Turkish: Native
- English: Intermediate

WORK EXPERIENCE

- April 2026 – Present

Game Developer – Twimh Games

Developing hybrid-casual puzzle games as part of a small, fast-moving team. I have shipped three titles to date, taking ownership of core gameplay mechanics and system architecture from prototype through live release. I also handle the technical side of iteration after launch, tuning systems based on player data and performance metrics.

- February 2026 - April 2026

Game Developer - Fire Studios

Worked on a hybrid-casual idle RPG, building core gameplay mechanics and shaping the system architecture alongside the team.

- May 2023 - January 2026

Game Developer - Charmy

Developed more than 10 mobile games independently, covering the entire development process from programming to SDK integration and optimization. Worked on both casual and hyper-casual projects, taking full technical responsibility and contributing to overall game design quality.

- October 2022 - March 2023

Game Developer - Supergears GAMES

Contributed to the development of Racing Kingdom, focusing on menu systems, realistic vehicle physics, scene and code optimization, and performance testing.

- March 2022 - August 2022

Game Developer - Dalak Games

Developed multiple hyper-casual games using Unity ECS, independently handling the full coding process and providing software support for several successful titles.

- July 2021 - March 2022

Game Developer - Reo-Tek

Developed several interactive museum installations using Unity, integrating device communication via Python and UDP to enable real-time human interaction.
